    Log.d( tag: "PREF",username);
}
```

g.kasapbasi.sharedpref (28404) Debug mc

/org.kasapbasi.sharedpref D/PREF: mc

// myPref.edit().putString("username","mc").apply();

String username= myPref.getString(key: "username", defValue: "");
Log.d(tag: "PREF",username);

MainActivity > onCreate()

asi.sharedpref (28639) Debug mc

apbasi.sharedpref D/PREF: mc

Yorum Satırı yapalım çalıştıralım

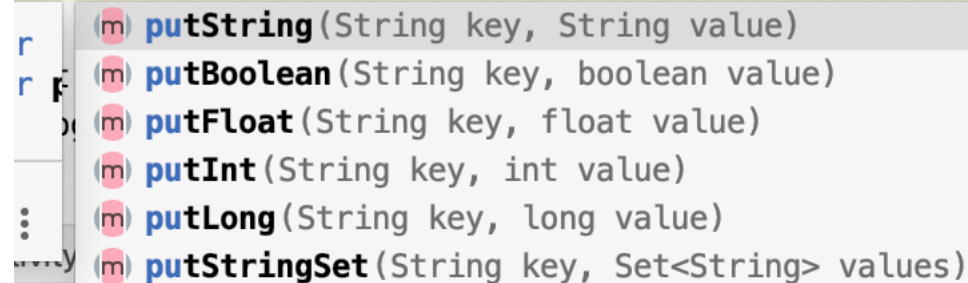

SharedPreferences içine ArrayList Koyma

- SP sadece belirli biçimde değerleri saklanmasına izin veriyor Bu sebeple bir şekilde Serileştirilmesine ihtiyaç vardır.

```
// myPref.edit().putString("username","mc").apply();
```

```
edit().pu
```

```
(m) putString(String key, String value)  
(m) putBoolean(String key, boolean value)  
(m) putFloat(String key, float value)  
(m) putInt(String key, int value)  
(m) putLong(String key, long value)  
(m) putStringSet(String key, Set<String> values)
```

^↓ and ^↑ will move caret down and up in the editor [Next Tip](#)

- Yeni bir Sınıf ekliyoruz ObjectSerializer
- Apache tarafından hazırlanan kod Androide uygun hale getirilmiştir.

YAZMA

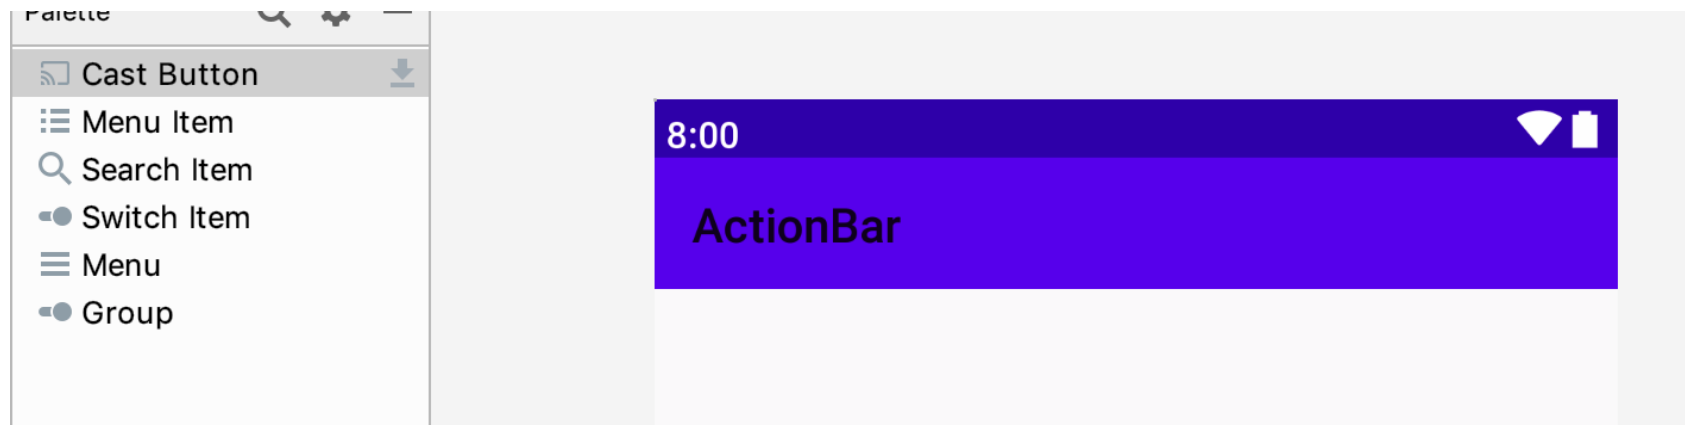

```
ArrayList<String> myFriends= new ArrayList<>();  
myFriends.add("SELÇUK");  
myFriends.add("ESRA");  
  
try {  
    myPref.edit().putString("friends", ObjectSerializer.serialize(myFriends)).apply();  
} catch (IOException e) {  
    e.printStackTrace();  
}
```

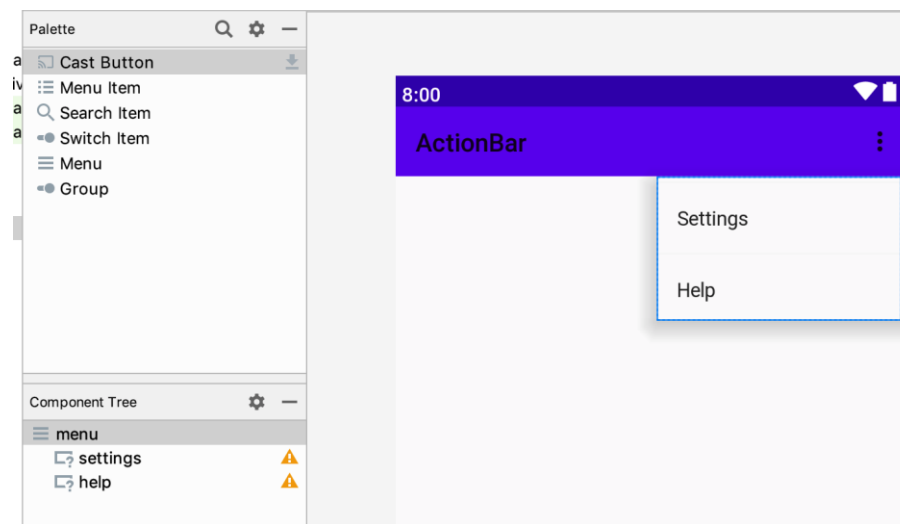

OKUMA

```
ArrayList<String> fromPref= new ArrayList<>();  
  
try {  
    fromPref= (ArrayList<String>) ObjectSerializer.deserialize(myPref.getString( key: "friends",  
        ObjectSerializer.serialize(new ArrayList<String>())));  
} catch (IOException e) {  
    e.printStackTrace();  
}  
  
Log.d( tag: "NewFriends", fromPref.toString());
```

ActionBAR

- Android içinde default bir menu yoktur eklemek gerekir Önceden vardı.
- Öncelikle Bir Layout eklenir. res içine
 - Menu ,Klasörü eklenir
 - Onun içine Menu resource file eklenir

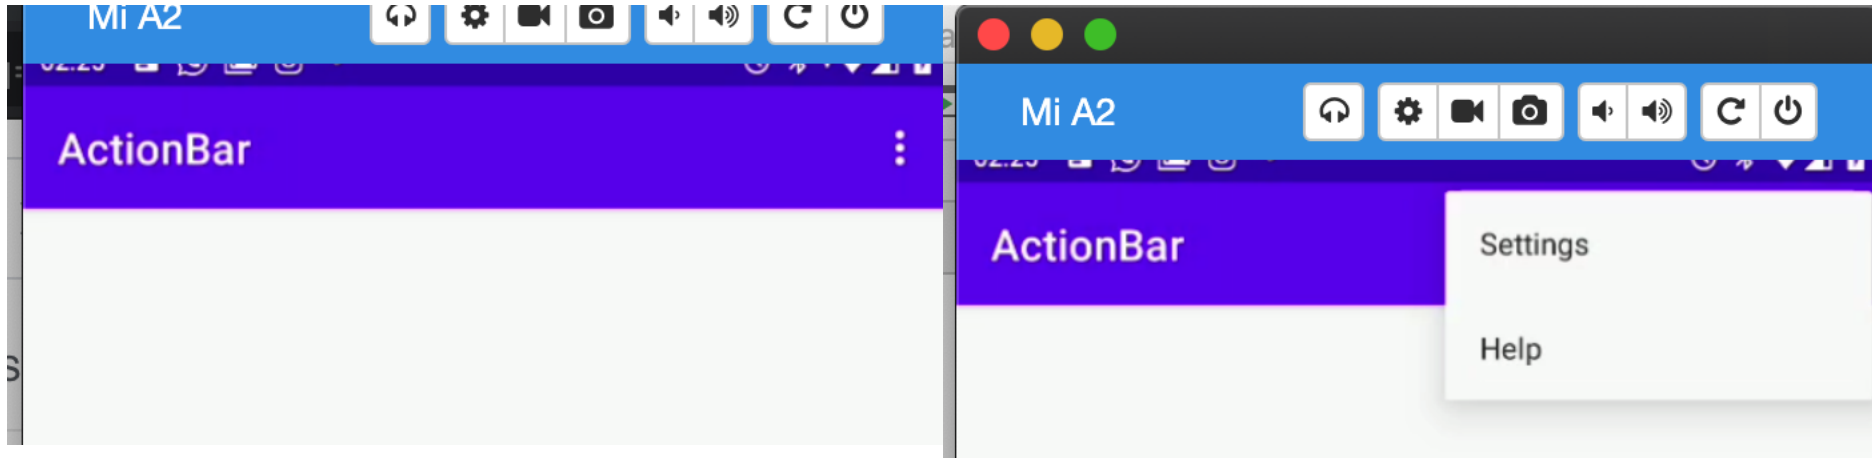

```
<?xml version="1.0" encoding="utf-8"?>
<menu xmlns:android="http://schemas.android.com/apk/res/android">
    <item android:title="Settings" android:id="@+id/settings"></item>
    <item android:title="Help" android:id="@+id/help"></item>
</menu>
```

```
@Override
public boolean onCreateOptionsMenu(Menu menu) {
    MenuInflater inf= getMenuInflater();
    inf.inflate(R.menu.main_menu,menu);
    return super.onCreateOptionsMenu(menu);
}

@Override
public boolean onOptionsItemSelected(MenuItem item) {
    super.onOptionsItemSelected(item);

    switch (item.getItemId()){

        case R.id.settings: Log.d( tag: "AB", msg: "Settings"); return true;
        case R.id.help: Log.d( tag: "AB", msg: "Help"); return true;
        default:
            return false;
    }
}
```

Alert Dialog

```
AlertDialog ald = new AlertDialog.Builder( context: this)
    .setTitle("Emin misin?")
    .setIcon(android.R.drawable.ic_dialog_alert)
    .setMessage("uygulamadan Çıkmak istediğine emin misin")
    .setPositiveButton( text: "Yes", new DialogInterface.OnClickListener() {
        @Override
        public void onClick(DialogInterface dialog, int which) {
            Toast.makeText( context: MainActivity.this, text: "Çıkıyoruz", Toast.LENGTH_LONG).show();
        }
    })
    .setNegativeButton( text: "oh No", new DialogInterface.OnClickListener() {
        @Override
        public void onClick(DialogInterface dialog, int which) {
            Toast.makeText( context: MainActivity.this, text: "Çıkıyoruz", Toast.LENGTH_LONG).show();
        }
    })
    .show();
```

My Notes

- Listview Ekle
 - OnCreate de yakala

```
public class MainActivity extends AppCompatActivity {  
    ArrayList<String> notes= new ArrayList<>();  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_main);  
        ListView v= (ListView) findViewById(R.id.myNotes);  
  
        notes.add("Example");  
  
        ArrayAdapter<String> adap = new ArrayAdapter<>( context: this,  
                                                    android.R.layout.simple_list_item_1,  
                                                    notes);  
  
        v.setAdapter(adap);  
    }  
}
```

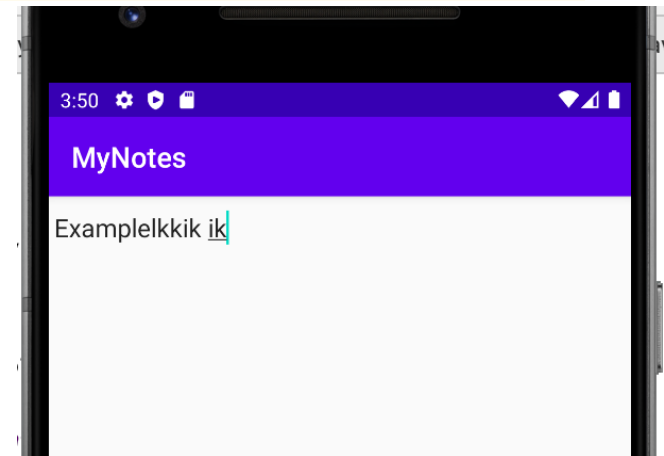

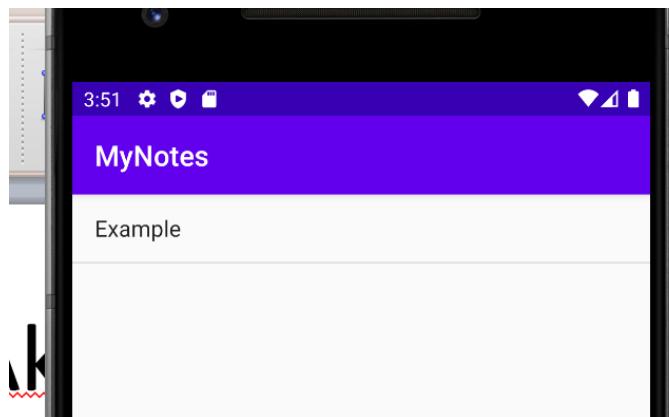

- Notelerin Girişleri için İkinci aktivite ekle
 - Listeye tıklandığında tıklanan item ID si ikinci activiteye gitsin
 - İkinci Aktivite içinde Multiline Text edit yerleştirelim

```
v.setOnItemClickListener(new AdapterView.OnItemClickListener() {  
    @Override  
    public void onItemClick(AdapterView<?> parent, View view, int position, long id) {  
        Intent Myint= new Intent( packageContext: MainActivity.this,NotesEntry.class);  
        Myint.putExtra( name: "noteID",position);  
        startActivity(Myint);  
    }  
});
```

Note Giriş Aktivitesi

```
public class NotesEntry extends AppCompatActivity {  
  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_notes_entry);  
        EditText et = (EditText) findViewById(R.id.editText);  
  
        Intent recInt= getIntent();  
        int noteID= recInt.getIntExtra( name: "noteID", defaultValue: -1);  
        if(noteID!=-1){  
            et.setText( MainActivity.notes.get(noteID));  
        }  
    }  
}
```

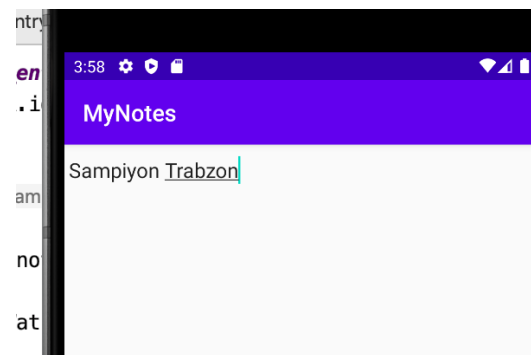

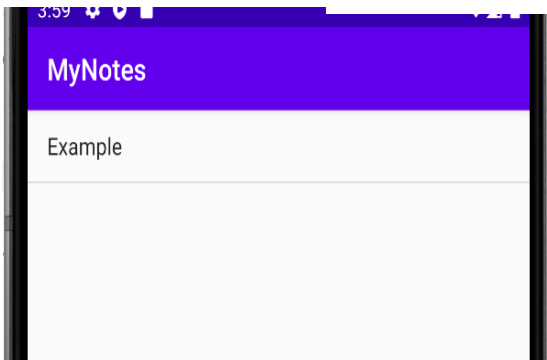

Edit Text Değiştiğinde işlem yap

```
et.setText( MainActivity.notes.get(noteID));

et.addTextChangedListener(new TextWatcher() {
    @Override
    public void beforeTextChanged(CharSequence s, int start, int count, int after) {
    }

    @Override
    public void onTextChanged(CharSequence s, int start, int before, int count) {
        MainActivity.notes.set(noteID,s.toString());
        MainActivity.adap.notifyDataSetChanged();
    }

    @Override
    public void afterTextChanged(Editable s) {
    }
});
```

Yeni Note Ekleme ve Silme

- Action Bar ile yapalım
 - Menu Klasörü ekle
 - Menu Resource layout ekle

```
@Override
public boolean onCreateOptionsMenu(Menu menu) {

    super.onCreateOptionsMenu(menu);

    MenuInflater inf=getMenuInflater();
    inf.inflate(R.menu.main_menu,menu);

    return super.onCreateOptionsMenu(menu);
}

private void Ekle() {
    Intent mint= new Intent(getApplicationContext(),NotesEntry.class);
    startActivity(mint);
}
```

```
@Override
public boolean onOptionsItemSelected(MenuItem item) {
    super.onOptionsItemSelected(item);
    switch (item.getItemId()){
        case R.id.ekle:
            Ekle();
            return true;
        case R.id.cikar: Cikar(item); return true;
        default:
            return false;
    }
}

et.addTextChangedListener(new TextWatcher() {
    ...
});

if(noteID!=-1){
    et.setText( MainActivity.notes.get(noteID));
}else{
    MainActivity.notes.add("");
    noteID=MainActivity.notes.size()-1;
}
```
